### **Abstract**

A good family environment has positive effects on student's lives. Parental involvement and motivation in education have been extensively researched over the years. Motivation is the driving force that prompts a person to act. Engagement is his observable behavior. Motivation is essential for engagement. Both engagement and motivation are interrelated yet distinct. Both of these will be more focused on the learning process than on other activities. Family environment affects education, child welfare, health, mental health, and behavior. The interaction between educational institutions and the family environment improves student standards, attendance, persistence, engagement, and motivation. This article describes how families of all backgrounds and their environments can act to support the growth and success of their children and youth.

*Keywords:* family environment, student engagement, student motivation, family promotes student engagement and motivation

### **Family Environment**

The home environment is the oldest and most essential of all the institutions that man has

invented to govern and integrate his behavior as he attempts to meet his basic wants. The family is a unit in which parents and children coexist. The individual is most influenced by his or her family environment. The home setting provides the youngster with his or her first experience of living. It catches him when he is fully uniformed, and vulnerable before any other agency has a chance to affect him.

### **Student Engagement**

Student engagement promotes cognitive, behavioral, emotional, and affective success in the learning process and higher-level thinking for lasting understanding. Student engagement is often used in regular school activities such as attending class, submitting required activities, and following teachers' directions in class. Many studies have identified student engagement as a desirable attribute in schools, colleges, and universities.

### **Student Motivation**

Motivation is seen as a critical aspect of our ability to progress in life. Motivation can be induced by society, lifestyle, material culture, and so on, or it can emerge naturally. In the learning process Student motivation is more likely. it has the capacity to feature both long and short segments. This will disclose the greatest strategies for the future.

### **Family Promotes Student Engagement and Motivation**

Parenting styles affect how involved parents are in their child's learning and their expectations for their children's success. Studies show that this positively correlates with student engagement. Student engagement leads to tangible benefits for many educational institutions in

terms of student achievement, discipline problems, effective student–teacher relationships, reduced high school dropout rates, and avoidance of health risks. Giving children opportunities to work independently will help develop their sense of competence and increase performance. When parents observe and praise children’s activities, they are more motivated to actively participate in future activities. Positive thoughts that parents have on children play a big role in developing self–esteem. Timely feedback helps create constructive and positive feelings. helping them travel towards their goals. The family environment can develop understanding skills if it takes into account contemporary situations.

### **Conclusion**

A family environment is essential for students to persevere despite challenges and obstacles as they engage in their learning activities. Engaged and motivated students exhibit positive behavioral engagement in learning activities. They select tasks based on their abilities.
